

# Agenda

- Opportunity
  - Review of Study Questions
  - Deliverable
- Presentation of Options
- Discussion of Options
- Selection Matrix
- Recommendation(s)

# Study Questions

- What are the comparison rates of adverse events (including neuropsychiatric) among deployed service members using mefloquine, doxycycline, or no antimalarial medication?
- What are the attributable risk factors (including mefloquine) for suicide among deployed and recently redeployed service members?

# Deliverable

- One or more study options along with recommendations on how to conduct the study(s).

# Adverse Events

- Outpatient visit
- Hospitalization
- Evacuation from theater
- Death
- Disability claim
- VA interaction
- Others:

# Study Option

- Brief description of the study
- Data sources:
- Data quality:
- Feasibility:
- Limitations:

# Selection Matrix

	Data Sources	Data Quality	Feasibility	Limitations	Score
Option 1					
Option 2					
Option 3					
Option 4					
Option 5					

# Who should conduct the study?

- Naval Health Research Center (NHRC)
- Uniformed Services University of Health Sciences (USUHS)
- Others:

# Recommendations:
